Perform Predictive Data Analysis in BigQuery

Statistic using Python for Data Science

Ilham Adib Priatama

Informatics Engineering Student | Software & Data Engineering | Python, SQL, Data Visualization
Semarang, Central Java, Indonesia

Summary

I am an Informatics Engineering student focused on Software and Data Engineering. I specialize in turning complex, manual operations into streamlined, data-driven systems.

Recently, during my internship at a fertilizer company, I led the digital transformation of their operational reporting. By engineering a digital reporting ecosystem and integrating it with Looker Studio dashboards, I eliminated manual log sheets and enabled real-time breakdown monitoring for the management team. I also developed an automated mobile Resource Planner using Google AppSheet to optimize technician workflows.

On the software development side, I build cross-platform applications using Flutter and Dart, with a strong grasp of database management (SQLite). My analytical stack revolves around Python and SQL for data logic and structuring.

I build systems that work efficiently, whether it is a mobile application for end-users or a data visualization dashboard for executives. Always eager to learn and build better tools. Let's connect!

Experience

PT Saprotan Utama Nusantara

Data Analyst Intern

January 2026 - February 2026 (2 months)

Demak Regency, Central Java, Indonesia

- Digitalized the operational reporting system using Tally Forms, successfully replacing manual log sheets and achieving daily adoption by 40+ field technicians.
- Built downtime and breakdown monitoring dashboards in Looker Studio to eliminate reporting delays and providing management with real-time operational visibility.

- Developed an MVP for a mobile resource planning app via Google AppSheet to automate technician scheduling and maintenance workflows.
- Developed the core functional logic for an Asset Management system, delivering a working backend prototype ready for UI integration.

Developer Community Universitas Semarang (DECOMUS)

Full Stack Web Developer Trainee

September 2023 - February 2024 (6 months)

Semarang, Central Java, Indonesia

- Completed a 6-month intensive bootcamp focused on building end-to-end web applications
- Gained strong foundation in software engineering concepts, system workflows, and backend integration
- Collaborated in agile teams, practicing version control, debugging, and deployment
- Developed an Admin Laundry Web Application, strengthening problem-solving and structured coding skills

Certificate available in Licenses & Certifications section.
